                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 6, Al

Patent No. 5837536

GENERAL INFORMATION:

APPLICANT: McDonagh, Kevin T.

APPLICANT: Nienhuis, Arthur

APPLICANT: Toletchew, Paul

TITLE OF INVENTION: MULTIDRUG RESISTANCE GENES AND IMPROVED

TITLE OF INVENTION: SELECTION OF CELLS TRANSDUCED WITH SUCH GENES

NUMBER OF SEQUENCES: 19

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 25; DB 3; Length 4646; 100.0%; Pred. Sequence 5, Application US/08793610

Patent No. 2858744

GENERAL INFORMATION:

APPLICANT: BAUM, Christopher

APPLICANT: STOCKING-HARBERS,

TITLE OF INVENTION: RETROVIRAL VECTOR HYBRIDS AND THE USE THEROF

TITLE OF INVENTION: FOR GENE TRANSFER

NUMBER OF SEQUENCES: 6

CORRESPONDENCES: 6

CORRESPONDENCES. MARMETER ADDRESS:

Sequence 3, Application US/0986686A

Sequence 3, Application US/0986686A

Patent No. US2002010224A1

GENERAL INFORMATION:

APPLICANT: Sorrentino, Brian

APPLICANT: Sobretz, John

TITLE OF INVENTION: A Method of Identifying and/or Isolating Stem Cells

TITLE OF INVENTION: A Method of Identifying and/or Isolating Stem Cells

TITLE OF INVENTION: A Method of Identifying and/or Isolating Stem Cells

TITLE OF INVENTION: A Method of Identifying and/or Isolating Stem Cells

CURRENT APPLICATION NUMBER: 109/584,586

PRIOR APPLICATION NUMBER: 09/584,586

PRIOR APPLICATION NUMBER: PCT/US99/11825

PRIOR APPLICATION NUMBER: 60/086,988

PRIOR PRILING DATE: 1998-05-27

PRIOR PILING DATE: 1998-05-27

PRIOR PILING DATE: 1998-05-27

SOFTWARE: Patentin version 3.0

SEQ ID NO 3

LENGTH. 2007
                                                                                                                                                                                                                                                                                                                                                                                                                                         APPLICANT: Sorrentino, Brian

Patent No. 553940

RAPLICANT: Bhatnagar, Satish K.
APPLICANT: George Jr., Albert L.
APPLICANT: Nazarenko, Irina

TITLE OF INVENTION: ANLIFICATION OF NUCLEIC ACID SEQUENCES

TITLE OF SEQUENCES: 2.
CORRESPONDENCES: 2.
ADDRESSEE: OncorPharm, Inc.
STREET: 200 Perry Perkway

CITY: Gathersburg

CONDURRY: Maryland

COUNTRY: USA

ZIP: 20977

COMPUTER READABLE FORM:
MEDIUM TYPE: FLOPPY disk

COMPUTER: IBNP C compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1,

Sequence 1, Application US/08752447

Patent No. 5994088

GENERAL INFORMATION:
APPLICANT: Mechetner, Eugene
TITLE OF INVENTION: Methods and Reagents for Preparing and
TITLE OF INVENTION: Using Immunoligcal Agents Specific for P-glycoprotein
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
CORRESPONDENCE ADDRESS:
STREET: 300 South Wacker Drive, Seventh Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

Publication No. US20060057564A1

GENERAL INFORMATION:

APPLICANT: Wang, David G.

TITLE OF INVENTION: Identifiction and Mapping of Single Nuclectide Polymorphisms

TITLE OF INVENTION: in the Human Genome

TITLE OF INVENTION: in the Human Genome

TITLE OF INVENTION: in the Human Genome

CURRENT APPLICATION NUMBER: US/10/301,480

CURRENT FILING DATE: 2002-11-21

PRIOR PELING DATE: 2002-08-09

PRIOR FILING DATE: 2001-08-10

PRIOR FILING DATE: 2001-08-10

NUMBER OF SEQ ID NOS: 1226818

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 9902
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 633311, Application US/10301480
